Chaos reigns or does it?

According to several sources, information technology is getting harder not easier. In 1995, the Software Productivity Group revealed that only 16% of software projects were considered successful. In dollar terms this equates to a massive waste of over US$140 billion.

Another source – the Standish Group, revealed similar findings. In one year, over US$250 billion was spent on approximately 175,000 projects. And that over 75% of these end in failure. See http://www.standishgroup.com/visitor/chaos.htm for more information on this topic.

What is Ripose?

Ripose is a business development life cycle technique, designed to address the problem of project failure as well as cost and time over runs. The Ripose Technique should ensure that chaos ceases to reign.

How does the Ripose Technique achieve this aim?

Ripose rapidly integrates patterns of strategic elements.

What does that mean?

Ripose is:

- Rapid – uses the keep it simply simple (KISS) principle

- Informative – provides quality documentation

- Process driven – uses a simple 7-step approach

- Object oriented – uses a series of simple yet powerful patterns

- Systemic – identifies integrated core and ancillary functions

- Environmental friendly – does not stress people out and resourcing is lean

Why should I consider using Ripose?

Ripose is better, faster and smarter and more cost effective than most other techniques on the market today. Ripose reduces the risk of project failure.

PREPare your Ripose goals. Can you afford not to use it?

What about eBusiness?

See our web site http://www.ripose.com/ebusiness.htm

What about best practice?

Ripose has integrated the 'best practices' of the 'best practice' techniques.

About us

Ripose specialises in providing information management professional services. We produce high quality deliverables from strategic plans to implemented solutions rapidly with the Ripose conceptual and logical compilers.

Ripose compilers

The Ripose conceptual and logical compilers are the computer software that empowers the Ripose Technique and provides Ripose architects with their competitive advantage.

All Ripose Technique objects are recorded in the compilers' knowledge repository. Strategic business plan and Information technology release plan deliverables are produced from the identified strategic elements.

Principal consultant

Charles Richter our principal consultant who developed the Ripose Technique has the advantage of over 30 years' experience and training in methodologies, system development and implementation. His knowledge and skills has been gained from extensive industry involvement. This knowledge and our team of associates enables us to readily identify issues and provide solutions that are critical to the successful completion of our assignments and your projects.
