Version #: 17 Sep 2022 (A work in progress)

# **Preamble**

Caspar is the software product that automates the Ripose approach. It was designed in 1990 and took less than a year to code. It contains the following 455 objects:

- 41 Tables
- 96 menus
- 62 code files
- 11 search methods
- 1 startup task
- 51 tool bars
- 193 screens

I will take me a number of months. To complete this body of work. To document how to use the 193 screens, 96 menus and 51 tool bars (the 340 most relevant objects) will take approximately 113 days (estimating that I can complete 3 per day).

So while I am busy writing this book and to provide immediate support I have already provided 2 web pages which can be used right now. The link to these are as follows:

- 1. A tour of Caspar (with a few screen shots) detailing:
  - The compiler
  - The phase
  - Who is involved
    - The grade of the Ripose Architect (RA)
    - Management
  - An estimate on how long each section takes
  - The main features
- 2. Help on how to use Caspar

Rules applicable to my <u>Universe of Discourse</u>. Four factors:

- 1. Limit
- 2. Differentiate
- 3. Integrate
- 4. Focus

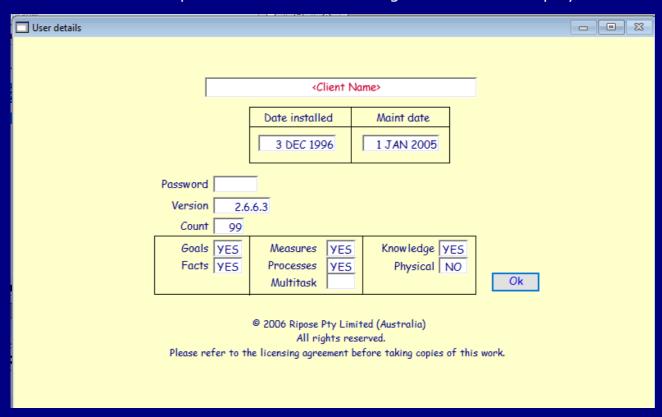

The rules for managing information are as follows:

| Factor        | Activity   | Class      |
|---------------|--|------------|
| limit         | Keep things as small as possible for as long as possible | 3 sections |
| differentiate | Separate sections into appropriate classes or phases     | Concept    |
|               |  | Logical    |
|               |  | Physical   |
| integrate     | Ensure all phases are fully aligned                      | All        |
| focus         | Prioritise the work                                      | Concept    |

# **Launching Caspar**

Welcome to the world of Caspar

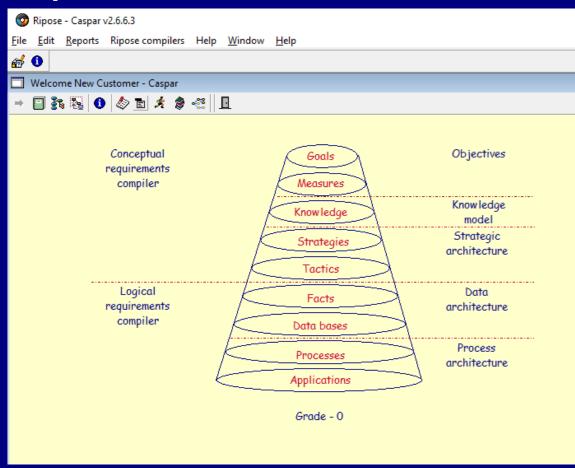

Double click on the Ripose icon and the following screen will be displayed:

- Password is an optional security function
- Count is used for an evaluation copy
- Permissions are set for version 2.6 which has no physical support at this stage
- Multitask signifies that there are multiple architects using the software

On clicking on the Ok button or pressing the Enter key the Main Caspar Screen will be displayed:

# **Caspar Main Screen**

The display of this screen will depend on the level of the Ripose architect using Caspar.

In this example the RAO architect signifies access to all sections.

The main screen is divided into 3 sections:

- 1. Menu bar
- 2. Tool bar
- 3. Compiler options Move cursor over the appropriate area and press the appropriate Mouse button. The appropriate screen will be activated
  - Conceptual Compiler
  - Logical Compiler

# Menu bar

There are 4 menu options:

- 1. File
- 2. Edit
- 3. Reports
- 4. Ripose compiler

### File

The following options are available but it is best not to use any of them:

- 1. Open library Do not use
- 2. Close library Do not use
- 3. Print destination see Select output
- 4. Page Setup Standard Windows function
- 5. Print report from disk Do not use
- 6. Trace Log Do not use
- 7. Exit Do not use as this will terminate Caspar. Use the Shutdown option

### **Edit**

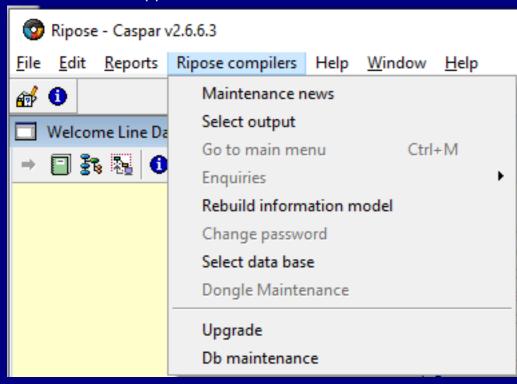

Usual Window operating system functions – do not use

### Reports

Use when you need to run a guick tailored report and only once you seek help.

# **Ripose compilers**

On clicking on the words Ripose compilers in the main menu line the following drop down menu will appear:

There are 10 options:

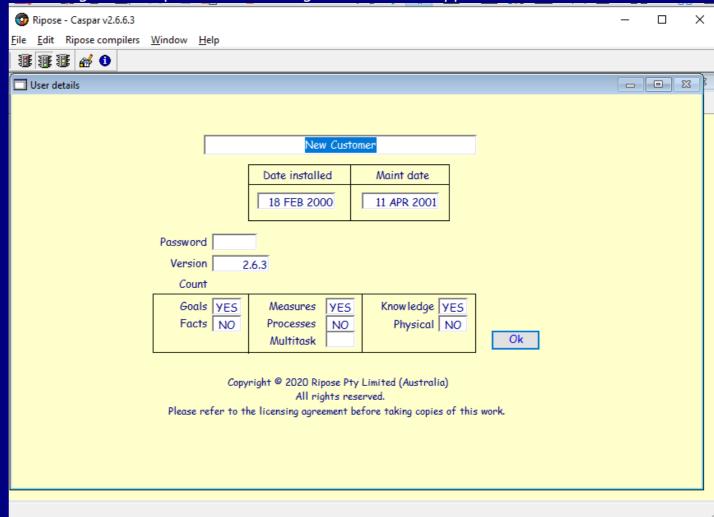

- 1. Maintenance news
- 2. Select output
- 3. Go to main menu
- 4. Enquiries Development only
- 5. Rebuild information model
- 6. Change password Development only
- 7. Select data base
- 8. Dongle Maintenance Development only. This is a security function
- 9. Upgrade

< Back

10. Db maintenance

# **Maintenance news**

On clicking on this option the following screen will be appear:

This is the same screen that appeared when you first logged on. There is only 1 option:

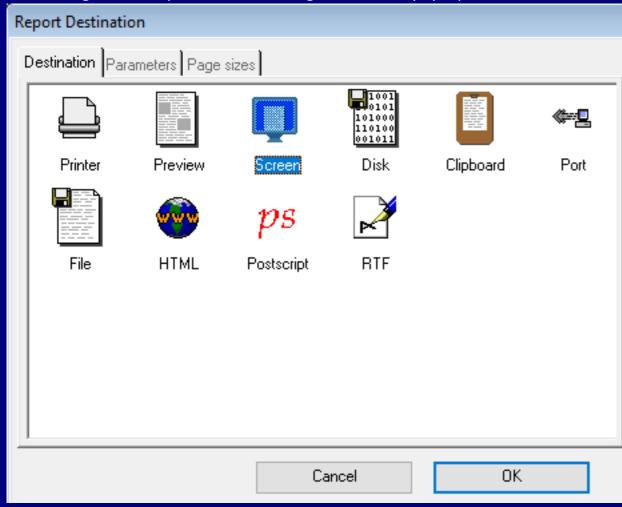

1. Ok

On clicking on the Ok button or pressing the Enter key the screen will close

< Back

# **Select output**

On clicking on this option the following screen will pop up:

### There are 3 tabs:

- Destination 10 options for you to choose from. The default selection is to send all printing to the screen. A printed copy can be created once the report has been run
- Parameters Disabled
- Page size Disabled. See Menu Bar option 4

# Go to main menu

This option is available on any screen except when on the main screen.

# **Enquiries**

Reserved for development team.

This menu can be used at any time to display (read only) the content of the following These options were provided mainly during the development phase of Caspar:

- 1. Knowledge classes
- 2. Entities
- 3. Attributes

# **Rebuild information model**

Use only when advised to. Used mainly in the development phase to rebuild the knowledge model.

# Select data base

Use only when working with multiple clients.

# **Upgrade**

Use only when advised to.

# **Db** maintenance

Use only when advised to. Usually to unlock records that were locked and not unlocked due to a power failure.

# **Tool bar**

The tool bar at the top contains all the available functions. Functions can be activated by hovering the cursor over the appropriate name or by pressing the right mouse button, in which case a pop up menu will appear. If there is only one function, left clicking on the tool bar icon will cause that action to be run. Functions:

- 1. Conceptual compiler
- 1. Logical compiler
- 2. Code generators To be provided in a future release
- 3. Get help
- 4. Business statements
- 5. Business metrics
- 6. Resource management
- 7. Tactic release planning Change management
- 8. Project management To be provided in a future release
- 9. Shut down

# **Conceptual Compiler**

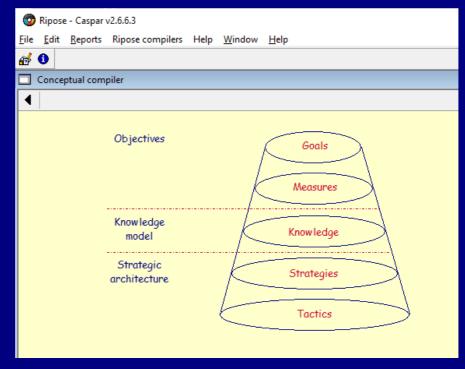

The rules for managing concepts are as follows:

| Factor        | Activity   | Class      |
|---------------|--|------------|
| limit         | Keep things as small as possible for as long as possible | 3 sections |
| differentiate | Separate sections into appropriate classes or phases     | Objectives |
|               |  | Knowledge  |
|               |  | Strategies |
| integrate     | Ensure all phases are fully aligned                      | All        |
| focus         | Prioritise the work                                      | Objectives |

Access to this compiler is afforded to Ripose Architects Grades 0, 1, 2 and 3. This compiler provides the capability to define and maintain the following business-centric objects:

- 1. Objectives RA1
- 2. Knowledge classes RA2
- 3. Strategic architecture RA3

On selecting the icon in the tool bar or placing the cursor over the words 'Conceptual Requirements Compiler on the Main Screen and activating the appropriate Mouse button the following window will open. Note that the content will depend on the grade of RA.

Direct link to training courses:

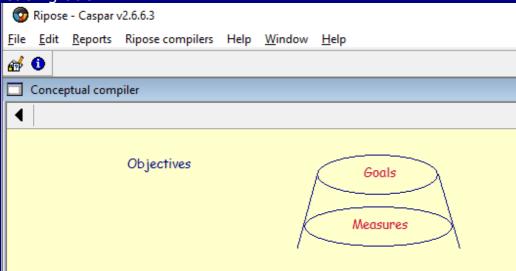

- <u>RA1</u>
- RA2
- RA3

# **Objectives architecture**

The rules for managing objectives are as follows:

| Factor        | Activity   | Class      |
|---------------|--|------------|
| limit         | Keep things as small as possible for as long as possible | 2 sections |
| differentiate | Separate sections into appropriate classes or phases     | Goals      |
|               |  | Measures   |
| integrate     | Ensure all phases are fully aligned                      | All        |
| focus         | Prioritise the work                                      | Goals      |

On selecting Objectives from the Conceptual Compiler screen the following window will be displayed (this is the screen for the RAO. The RA1 will only see Goals and Measures, the RA2 Knowledge and the RA3 Strategies and Tactics. This helps to focus the attention of each grade:

There are 2 ways to proceed:

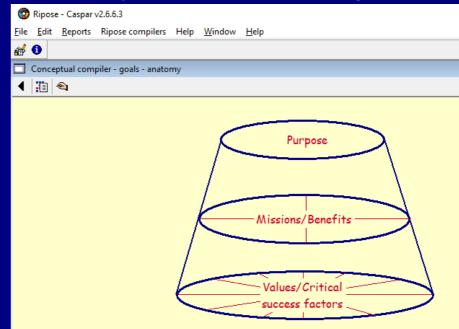

- 1. Right click anywhere on the screen and a drop down menu will appear. Then select Goals or Measures
- 2. Point the cursor at either <u>Goals</u> or <u>Measures</u> and press the appropriate Mouse button

### Goals

The rules for managing goals are as follows:

| Factor        | Activity   | Class        |
|---------------|--|--------------|
| limit         | Keep things as small as possible for as long as possible | 3 sections   |
| differentiate | Separate sections into appropriate classes or phases     | Purpose (1)  |
|               |  | Benefits (4) |
|               |  | Values (11)  |
| integrate     | Ensure all phases are fully aligned                      | All          |
| focus         | Prioritise the work                                      | Values       |

On selecting Goals from the previous window the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### Tool bar

- 1. Close window Return to previous window
- 2. Objectives global overview
- 3. SWOT analysis

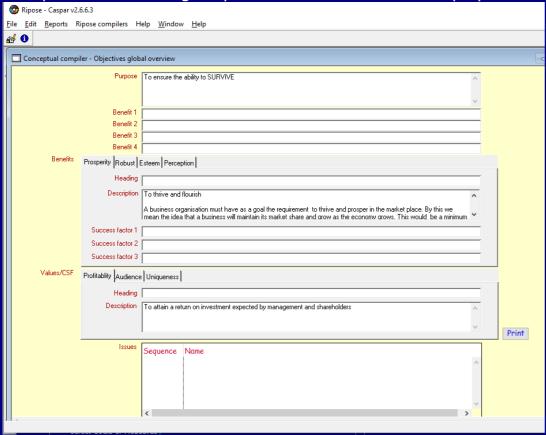

### Content of screen

There are 2 ways to proceed:

- 1. Right click anywhere on the screen and a drop down menu will appear. Then select any function
- 2. Point the cursor at either Purpose, Benefits (Missions) or Values (CSF) and press the appropriate Mouse button

### **Objectives global overview**

On selecting this option the following very detailed window will be displayed:

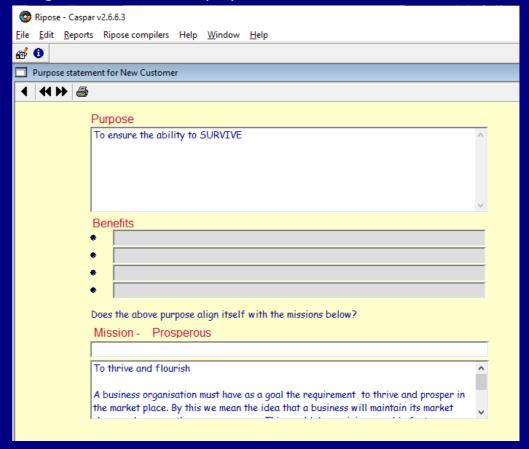

This screen has 6 areas of focus:

- 1. Purpose with the supporting 4 Benefit headings
- 2. Tabs with the 4 Benefits with each of their appropriate Value (CSF) headings
- 3. Tabs with the appropriate Value statements (these change as each Benefit is selected)
- 4. Measures which change as each Value is selected
- 5. A Print button which will produce a print out of the all the Objectives
- 6. A red close window button (top right corner)

### **Purpose statement**

This function will enable you to maintain the Purpose Statement. On selecting this option the following window will be displayed:

### Functions

There are 2 functional areas:

- 3. Tool bar
- 4. Content of the screen

### **Tool bar**

- Close window Return to previous window
- Previous benefit
- Next benefit
- Publish Print the purpose statement

### **Content of screen**

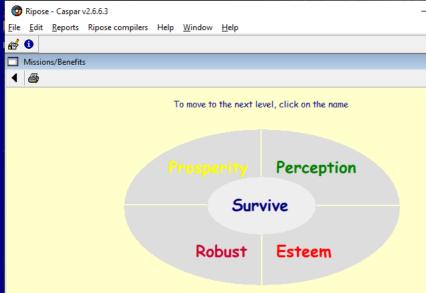

Right click for options:

- Modify
- Publish
- Next
- Previous
- Close window Return to previous window

### **Benefits**

This function will enable you to maintain the 4 Benefit Statements. To understand why there are only 4 please study the content on <u>slide 2 of the RA1 course</u>.

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

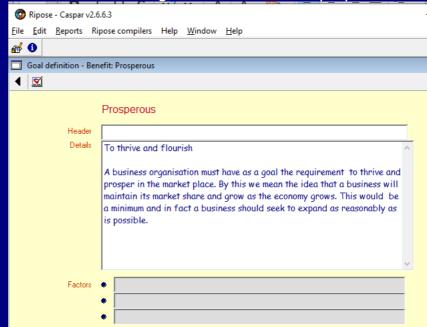

- 1. Close window Return to previous window
- 2. Publish the 4 benefits

### **Content of screen**

- Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option
- · Click on a Benefit

### **Maintain Benefits**

On selecting any Benefit the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window Return to previous window
- 2. Open the Values screen for the chosen Benefit

### **Content of screen**

Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option

There are 2 functions:

- Modify the benefit
- Close the window Return to previous window

### **Values**

This function will enable you to maintain the 11 Value Statements. To understand why there are 11 please read the study the content on <u>slide 2 of the RA1 course</u>.

To limit the clutter the value screens have been divided into 4 separate windows. Each one will provide the identical functions. On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

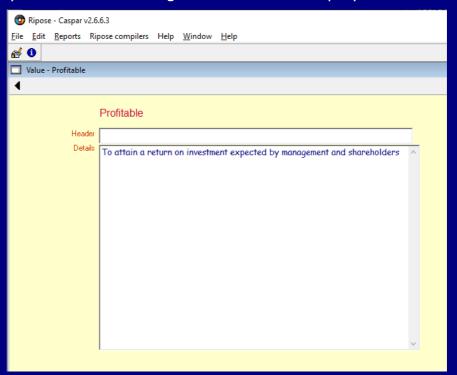

1. Close window – Return to previous window

### **Content of screen**

- Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option
- Select a Value

### **Maintain Values**

On selecting any Value the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

1. Close window

### **Content of screen**

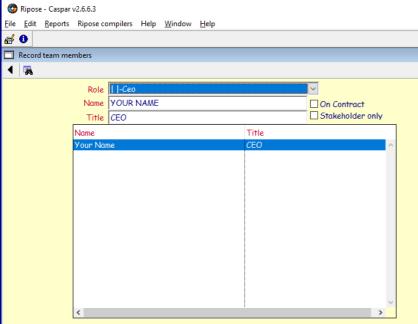

Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option

There are 2 functions:

- Modify the Value
- Close the window Return to previous window

### **SWOT Analysis**

This function will enable you to manipulate all the options to help undertake a SWOT analysis. On selecting this option the following screen will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Search for a name

### **Content of screen**

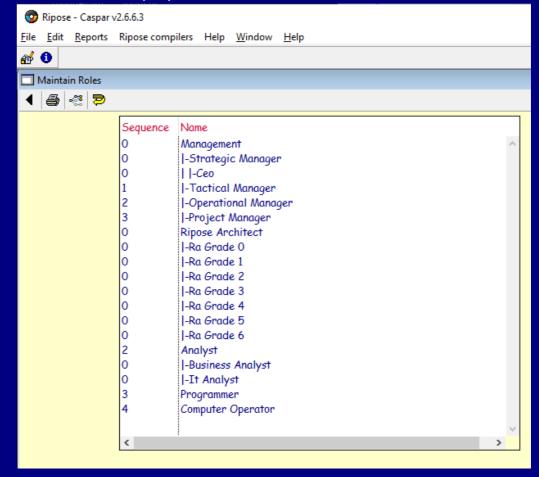

- Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option
- Select a person

Drop down menu options from screen

- 1. Define roles
- 2. Find
- 3. Add
- 4. View all rankings
- 5. Score card
- 6. Exit

### **Define Roles**

This function is used to maintain the various roles. On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### Tool bar

- 1. Close window Return to previous window
- 2. Publish This will produce a list of every description
- 3. List structure This print the list as it appears on the screen
- 4. Deselect all list items

### **Content of screen**

Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option

Drop down menu options

- 1. Add
- 2. View
- 3. Insert
- 4. Remove
- 5. Move
- 6. Modify
- 7. Publish See tool bar
- 8. Deselect See tool bar
- 9. Close window Return to previous window

### Add a role

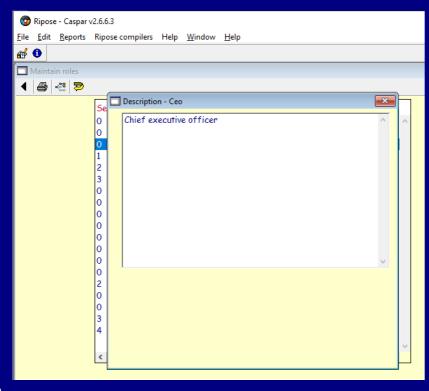

- 2 functions are available
  - 1. Add a new level zero role
  - 2. Add a role to an existing hierarchy

### Add a new level zero role

Ensure no line is selected. Use the Deselect option if necessary The following

### View a role

The following window will be displayed

### Functions:

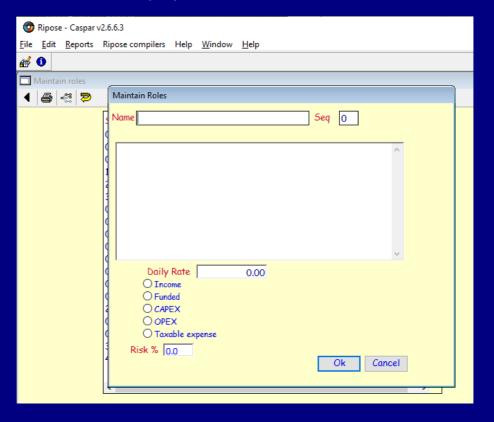

• Use the Red button or click on the left area above the tool bar and select Exit to close the window – Return to previous window

### Insert a role to an existing hierarchy

Select the line > Right click > Select Add

### Add or maintain a role

The following window will be displayed

### **Functions:**

- Name: Enter a new name. The system will check for duplicates and warn you if found
- Seq: To control the positioning of the entry which is controlled by Sequence and alphabetic name
- Description: Describe the role
- Daily Rate: Optional
- Radio button: Select an appropriate radio button (optional)
- Risk: Enter a risk percentage (optional)
- Enter or Press Ok to accept
- Cancel: To reject entry

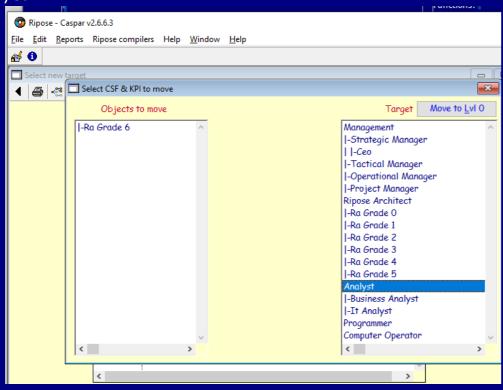

### Remove a role

Select the line > Select Remove

If the role is currently allocated you will not be able to remove it

### Move a role

Select the line (if it is a level 0 you will not be able to move it) > the following screen will be displayed

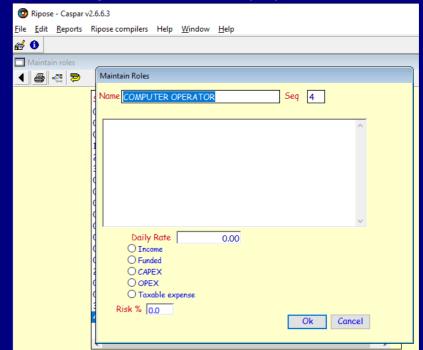

### **Functions**

- Move to level 0: To promote the role to the top of the hierarchy
- Select the new owner
- Close window (the red button top right) Return to previous window

# Modify a role

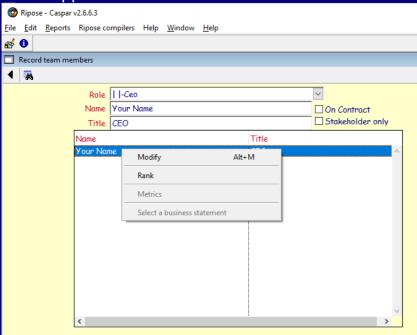

Select the role > the following screen will be displayed:

The functions are the same as for add or maintain a role

Drop down menu from selecting a person:

The following menu will appear:

### **Functions**

- Modify (Alt M is a short cut)
- Rank

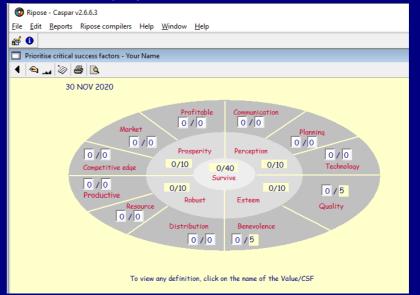

### **Modify**

The cursor will position itself to the name. You can now:

- Type in a new name
- Rename the title
- Select another role. If the role has subordinates you will be advised enabling you you choose a leaf
- Ok Enter or click (accepts changes)
- Cancel

### Rank

The following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen Right click to see options

### **Tool bar**

- 1. Close window Return to previous window
- 2. Rank
- 3. Show graph (of rankings)
- 4. Remove rankings
- 5. Publish reports
  - Score worksheet
  - Full scorecard Shows all the details of the
  - Report For inclusion in the Proof of Concept (PoC)
- 6. Mitigations Reason for poor ranking

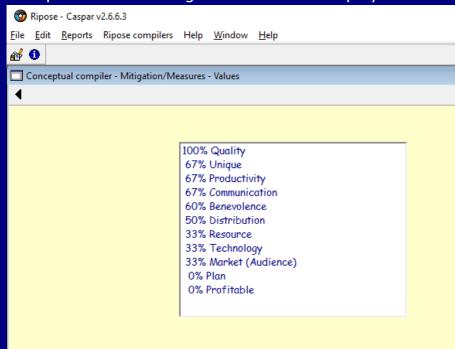

### **Content of screen**

- 1. Rank Page 6 of Breaking the Systems Barrier
- 2. Graph
- 3. Mitigations
- 4. Reports
- 5. Remove
- 6. Close window Return to previous window

< Back

### Mitigations

On selecting this option the following window will be displayed:

There are 2 functional areas:

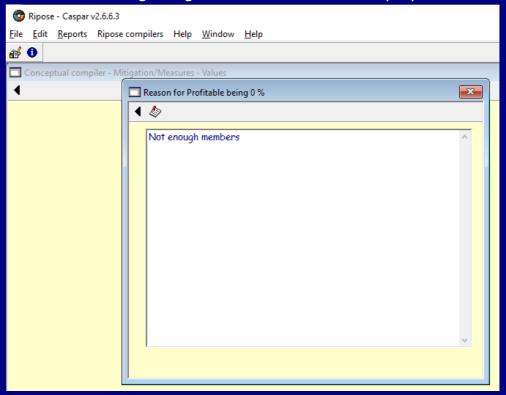

- 1. Tool bar
- 2. Content of the screen Select a Value

### **Tool bar**

1. Close window – Return to previous window

### **Content of the screen**

Select a Value and the following mitigation window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window Return to previous window
- 2. Modify reason This will enable you to modify the mitigation resaon in the content area

### **Content of the screen**

Enter mitigation reason for the poor ranking. Then:

- Click on Ok or press Enter
- Cancel to reject

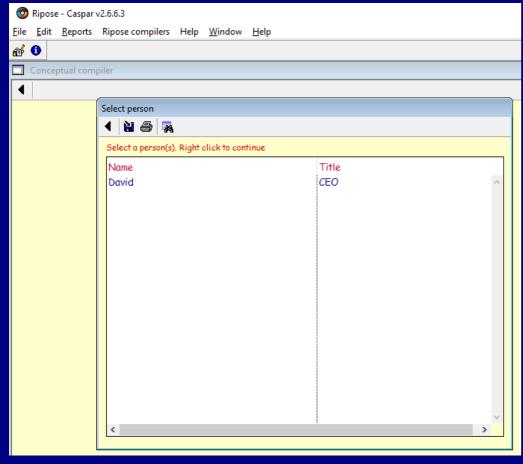

### Measures

The rules for managing Measures are as follows:

| Factor        | Activity   | Class       |
|---------------|--|-------------|
| limit         | Keep things as small as possible for as long as possible | 11 values   |
| differentiate | Separate sections into appropriate classes or phases     | KPI         |
|               |  | PI          |
| integrate     | Ensure all phases are fully aligned                      | With Values |
| focus         | Prioritise the work                                      | Knowledge   |

KPI: Key Performance Indicator PI: Performance Indicator

On selecting Measures from the Objectives window the following window will be displayed if and only if the Values have been ranked by at least one business operative (otherwise a message will pop up):

There are 2 functional areas:

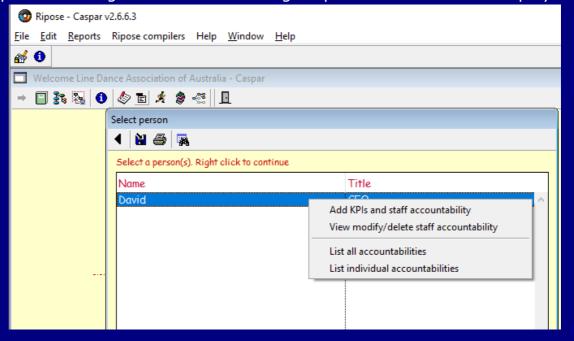

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window Return to previous window
- 2. Export KPI hierarchy This will take a copy of the KPIs which can be pasted into a spreadsheet program for decision making
- 3. Export KPIs in printable format This will take a copy of the KPIs which can be pasted into a word processing program for producing the Proof of Concept
- 4. Find a person Used if the list is too long

### **Content of the screen**

Select a person and right click. The following drop down menu will be displayed

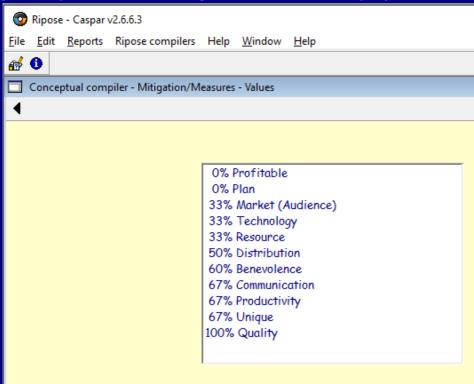

The following functions are available:

- Add KPIs and staff accountability
- View modify/delete staff accountability
- List all accountabilities
- <u>List individual accountabilities</u>

Add KPIs and staff accountability

On selecting this option the following window will be displayed:

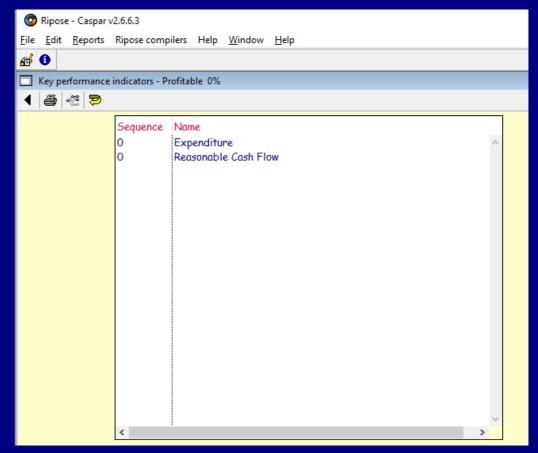

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen Select a Value. Preferably start with the lowest ranking ones

### **Tool bar**

1. Close window – Return to previous window

On selecting a Value the following window will be displayed:

There are 2 functional areas:

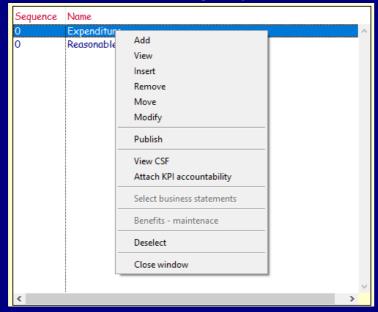

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window Return to previous window
- 2. Publish the Measures Full descriptions
- 3. Print the list Without full descriptions
- 4. Deselect the line

### **Content on the screen**

Right click on a selected line and the following drop down menu will be displayed:

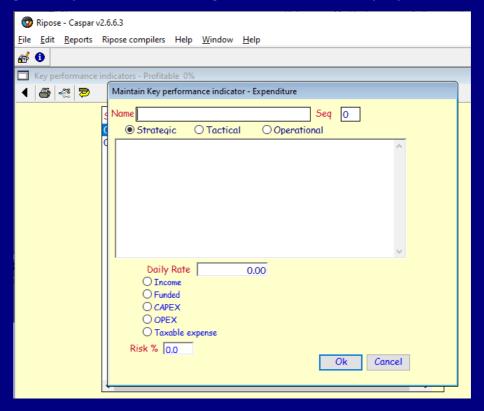

The following functions are available:

- Add
- View
- Insert
- Remove
- Move
- Modify
- Publish
- View Value/CSF
- Attach KPI accountability
- Deselect
- Close window

### Add a new entry

On selecting this option the following window will be displayed:

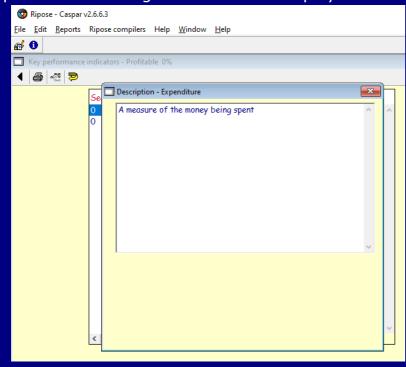

### **Functions:**

- Name: Enter a new name. The system will check for duplicates and warn you if found
- Seq: To control the positioning of the entry which is controlled by Sequence and alphabetic name
- Description: Describe the entry
- Daily Rate: Optional
- Radio button: Select an appropriate radio button (optional)
- Risk: Enter a risk percentage (optional)
- Enter or Press Ok to accept
- Cancel: To reject entry

### View the entry description

On selecting this option the following window will be displayed:

### **Function**

• Close window (the red button top right) – Return to previous window

### **Insert and entry**

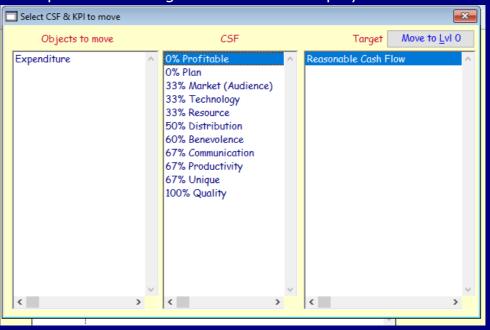

See add a new entry. A subordinate entry will be added.

### Remove

To delete an entry. Cannot remove if it has any subordinates or an attached knowledge class.

### Move

To change ownership. The following window will be displayed:

### **Functions:**

- Promote to its own hierarchy
- Move to different Value/CSf

# **Modify**

The window to Add an entry will be displayed. The same functions are available.

### **Publish**

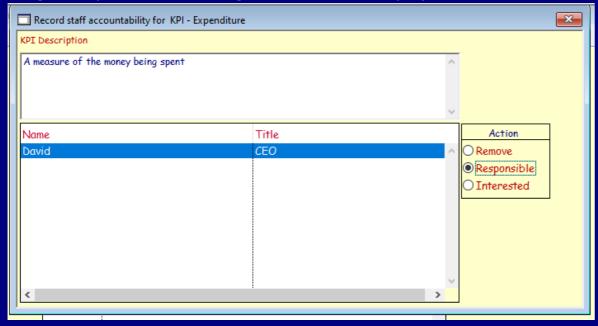

Will print a copy of the entry

# View Value/CSF

A window will pop up with the details of the Value.

### **Attach KPI accountability**

On selecting this option the following window will be displayed:

### Add an Action

- Remove To remove the accountability factor
- Responsible To assign responsibility
- Interested To assign interest only

### **Modify KPI responsibility**

The same window as Attach KPI accountability will be displayed.

### List all accountabilities

This option will produce a .txt file called StaffKPI.txt in the same directory defined in the .ini file. You will be warned if the existing file will be overwritten. It will show all staff member accountabilities.

### List individual accountabilities

See List all accountabilities. This will only print the selected staff accountability.

### The theory of working with Measures

- Reading material
- <u>Lecture</u>

End of Objectives functions < Back

# **Knowledge architecture**

Knowledge architecture is the capability missing in every approach designed to handle the difference between 'Convenient Truth' and 'Factual Evidence'.

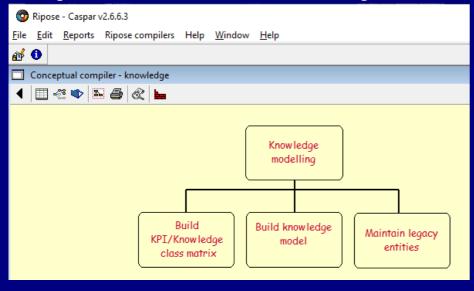

'Convenient Truth' is spread by the belief the 'data' is the only 'thing' that provides a clear understanding of business-centric operatives' needs.

'Factual Evidence' is the proof that 'data' is a poor substitute for 'knowledge'.

The rules for managing knowledge are as follows:

| Factor        | Activity   | Class         |
|---------------|--|---------------|
| limit         | Keep things as small as possible for as long as possible | From SWOT     |
| differentiate | Separate sections into appropriate classes or phases     | Entity types  |
|               |  | Not Data      |
| integrate     | Ensure all phases are fully aligned                      | With Measures |
| focus         | Prioritise the work                                      | Strategies    |

On selecting knowledge from the main window the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### Tool bar

- 1. Close window
- 2. Build KPI knowledge class matrix
- 3. Build knowledge model
- 4. Maintain legacy entities
- 5. General maintenance functions
- 6. Knowledge repository reports
- 7. The other 2 functions are reserved for development

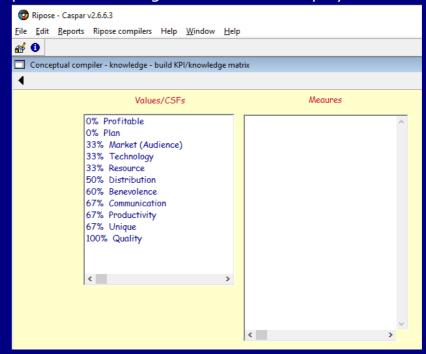

### **Content of screen**

- Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option
- Click on any of the lower 3 boxes

### **Build KPI knowledge class matrix**

This function is used to build a matrix linking a measure to the 23 fundamental entities. It is an optional function.

On selecting this option the following window will be displayed:

There are 2 functional areas:

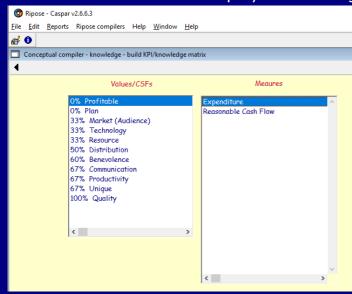

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

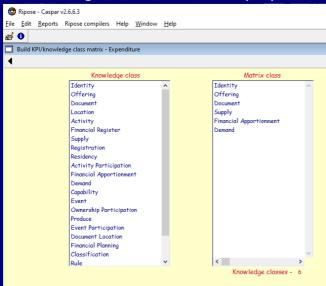

1. Close window

### **Content of the screen**

Select a Value and the measures will be displayed in the right hand list

Select a measure and the following window will be displayed:

If the matrix has any fundamental entities attached to it they will be displayed.

There are 2 functional areas:

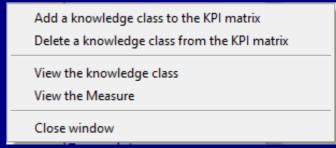

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

1. Close window

### **Content of the screen**

Right click anywhere on the screen and the following menu will be displayed:

The following options are available

- Add a knowledge class to the KPI matrix
- Delete a knowledge class from the KPI matrix
- View the knowledge class
- View the measure
- Close window

### Add a knowledge class to the KPI matrix

Select a knowledge class > Double click (or drag and drop into the right hand list)

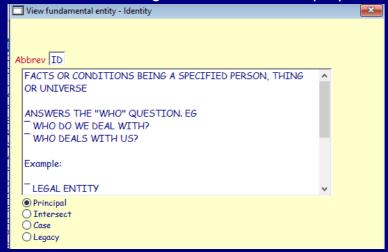

If the knowledge class already exists: You will receive a message otherwise the knowledge class will be added to the matrix

### Delete a knowledge class from the KPI matrix

Select the knowledge class in the right hand list. If you have already started to model the knowledge for this measure the system will prevent you from removing it. If you have not stared to add entities to this knowledge class you will be asked to confirm the removal.

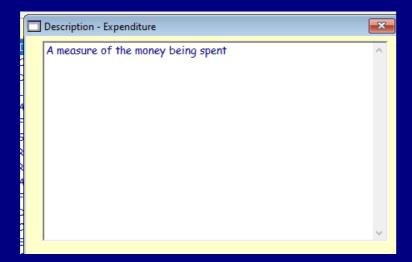

# View the knowledge class

If this option was selected the following window will be displayed:

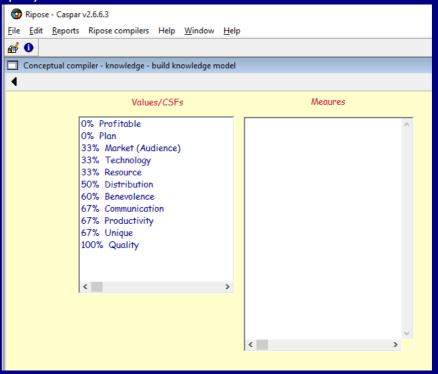

### View the measure

If this option was selected the following window will be displayed:

# **Build knowledge model**

This function is used to add entities to the measure model. If selected the following window will be displayed:

There are 2 functional areas:

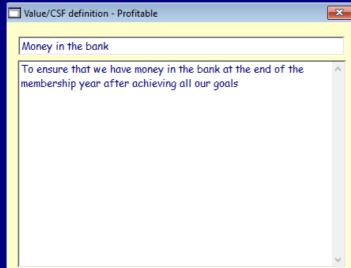

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

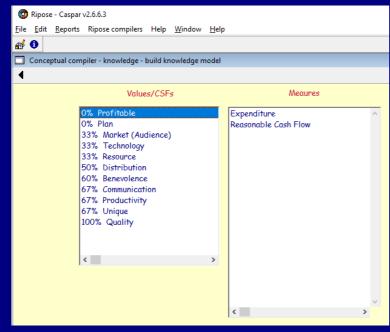

1. Close window

### Content of the screen

Right click anywhere on the screen and a menu will pop. Select the View option and the following window will be displayed

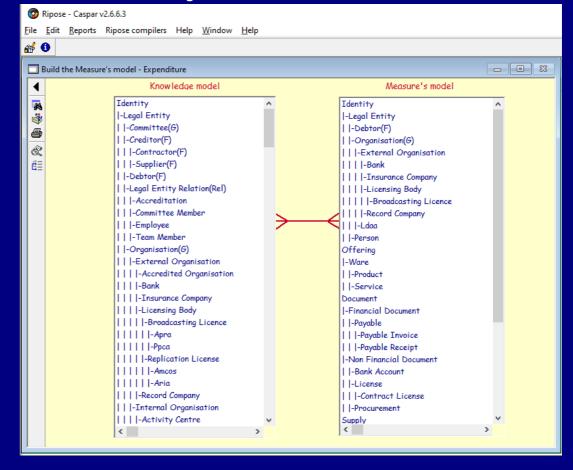

Select a value and the measures attached to the Value will be displayed in the right hand list:

Select the Measure and the next window will be displayed (a warning will be given if you neglected to build a Measure/Knowledge matrix which can be ignored a matrix will be built at this time):

The following window is used to manage the knowledge classes for each Measure. It will build the business knowledge model:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### Tool bar

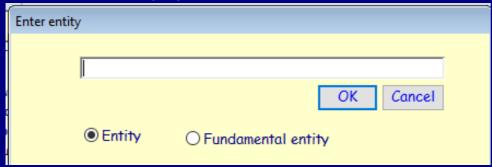

- 1. Close window
- 2. Find an entity
- 3. Duplicate the Measure model
- 4. List entities in the knowledge model
- 5. View measure
- 6. View associations

### **Content of screen**

- Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option
- Click on an entity and right click to view menu options

### Find an entity

The following window will be displayed:

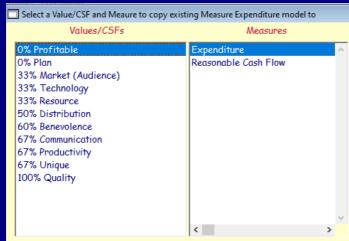

### **Functions:**

- Enter an entity name
- Select whether an entity type (default) or Fundamental
- Cancel
- Ok to accept. The list will be searched and if found will be selected

### **Duplicate the Measure model**

This function enables you to replicate knowledge models. On selecting this option the following window will be displayed:

### **Functions:**

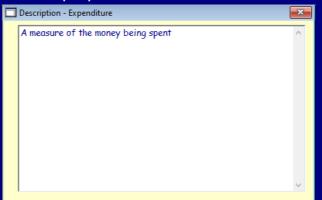

- Select another Value and Measure and the new Measure Knowledge model will be created
- Close window

### List entities in the knowledge model

This will produce a report. You will have the option to print the descriptions as well.

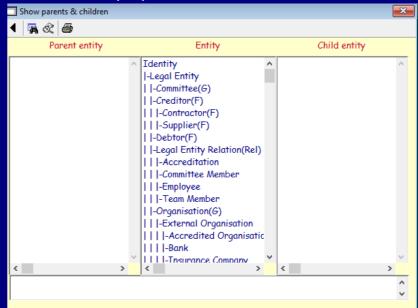

### **View measure**

The following window will be displayed:

### **View associations**

The following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Find an entity see previous panel
- 3. View the entity displays the information about the entity
- 4. List associations produces a list oif all accociations

### **Content of View association screen**

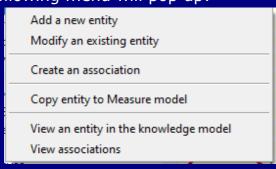

The window has 4 sections:

- The parent entity On selecting an entity in the middle list the owner/s of the entity will be displayed
- Entity The entity of focus
- Child entity Lists all the linked entities
- The degree of the association Select any entity in any of the 3 lists and the type of association will be displayed as either a:
  - Subset
  - Super-set
  - One to many

Continuation of content on knowledge class window

Once the entity has been located select it from the left hand list then:

- Double click (or drag and drop entity into the right hand list)
- Right click and the following menu will pop up:

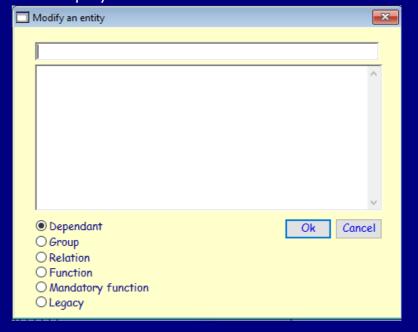

### **Functions:**

- Add a new entity
- Modify an existing entity
- Create an association
- Copy entity to Measure model (same as double click or drag and drop)
- View an entity in the knowledge model
- View associations See previous instructions

### Add a new entity

This function will add a new entity into the hierarchy of the selected entity. The following window will be displayed:

### **Functions:**

- Enter the name (the system will reject duplicates)
- Select the entity type (<u>reading material from RA2 course</u>)
- Ok or press enter
- Cancel to reject

### Modify an existing entity

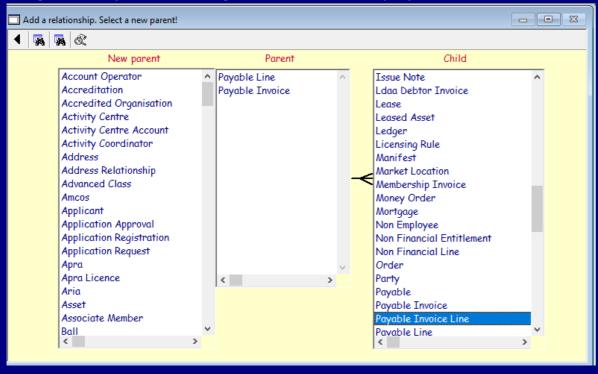

See Add a new entity

### Create an association

This function is used to link entities in a one to many relationship (see lecture for the RA2 on <u>Lecture 9e</u>). Use of associations:

- 1. All associations are regarded as 'one to many'. The 'many-to-many' relationships are resolved by the intersecting fundamental classes
- 2. The nature of association (mandatory or optional) will be established in the 'transformation' of the logical data model stage see <u>Lecture 13</u> for the RA5
- 3. Associations determines strategies and tactics See next section

On selecting an entity the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Find a parent entity A window will be displayed. Enter entity name. If the entity exists it will be highlighted in the left hand list. If selected it will be added to the middle list
- 3. Find a child entity window will be displayed. Enter the entity name. If the entity exists it will be highlighted in the right hand list. The existing parents will be displayed in the middle window
- 4. View associations <u>See previous instructions</u>

### **Content of screen**

After selecting a child entity the following functions are available:

- Select new parent and double click or drag and drop into middle list
- Select an existing parent and you will be asked to conform the deletion

End of Knowledge functions < Back

# **Strategic architecture**

Background reading:

- From 'Breaking the Systems Barrier'
- Strategic management
- Strategising the strategy

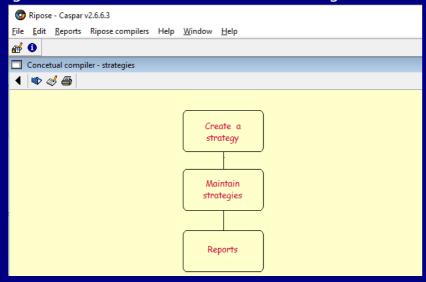

The rules for managing strategies are as follows:

| Factor        | Activity   | Class          |
|---------------|--|----------------|
| limit         | Keep things as small as possible for as long as possible | 5 Strategies   |
| differentiate | Separate sections into appropriate classes or phases     | Strategies     |
|               |  | Tactics        |
| integrate     | Ensure all phases are fully aligned                      | With Knowledge |
| focus         | Prioritise the work                                      | Logic          |

If you decide to follow any other approach to strategies be prepared to fail spectacularly.

# **Strategies**

On selecting strategies from the main window the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Create a strategy
- 2. Maintain strategies
- 3. Strategy report

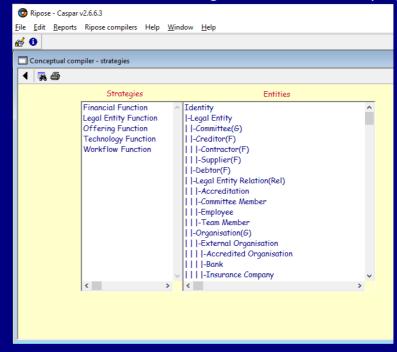

### **Content of screen**

- Right click anywhere on the screen and a drop down menu will appear. Then select the appropriate option
- Click on any of the 4 boxes

### **Create a strategy**

As there are only 5 generic strategies this function is not really needed. Use with discretion.

On selecting the create function the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

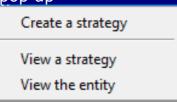

- 1. Close window
- 2. Find an entity
- 3. Print entities not in a tactic

### **Content of the screen**

Click on the strategy in the left hand list. The allocated entity will be found and highlighted in the right hand list.

Find an entity or select one in the right hand list then:

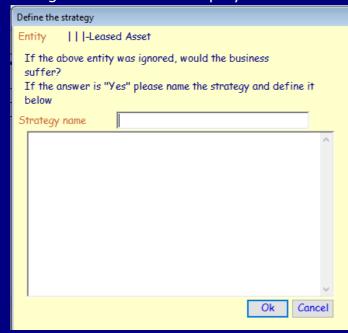

• Right click and a menu will pop up

- Select an option
- Double click on the entity

### **Create a strategy**

If the entity is already allocated to a strategy a warning message will appear. If not allocated the following window will be displayed:

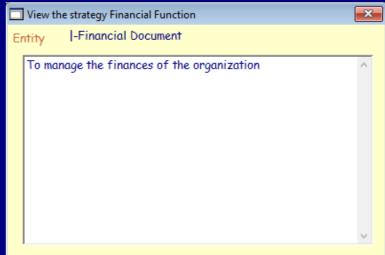

### **Functions:**

- Enter a name of the strategy
- Enter a description
- Ok or press Enter to accept
- Cancel to reject

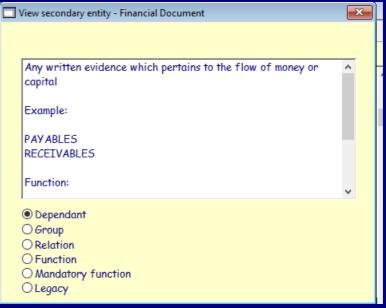

# View a strategy

The following window will be displayed:

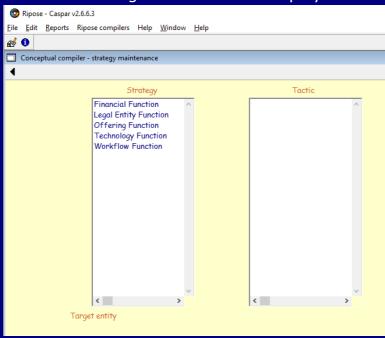

### View an entity

The following window will be displayed:

### **Maintain a strategy**

On selecting this option the following window will be displayed:

There are 2 functional areas:

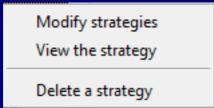

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

1. Close window

### **Content of the screen**

Select a strategy > The tactics will be displayed in the right hand list > The allocated entity will be displayed > Right click and the following menu will pop up:

The following functions are available

- 1. Modify strategy
- 2. View the strategy
- 3. Delete the strategy

### **Modify strategy**

The window to create a strategy will be displayed.

### View a strategy

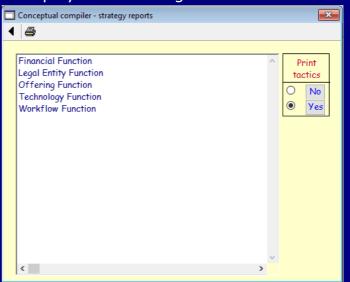

See previous page.

### **Delete a strategy**

Can only be done if there is no tactic.

### Reports

Selecting this option will display the following window:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Print all

### **Content of the screen**

To choose whether or not you want to print the tactics.

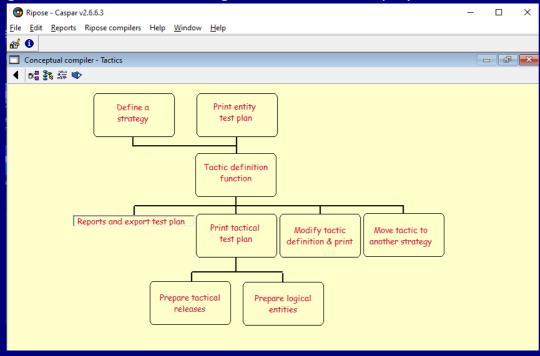

# **Tactics (systems)**

Tactics are probably the most difficult to manage of all the business concepts. This is because a tactic may take weeks, if not months, to prove to be efficient and effective. Brainstorming tactics is possibly the worst approach. What if:

- 1. The wrong tactic is chosen?
- 2. It takes weeks or months to disprove the chosen tactic?

This is why this section is probably the most comprehensive and detailed of all the functions. This is why the RA3 has to be able to understand and work with the knowledge model in order to ensure no tactic will ever be wrong.

On selecting this function the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Define a strategy See previous section
- 3. Define a tactic
- 4. Move tactic to another strategy
- 5. Prepare logical entities

### **Content of the screen**

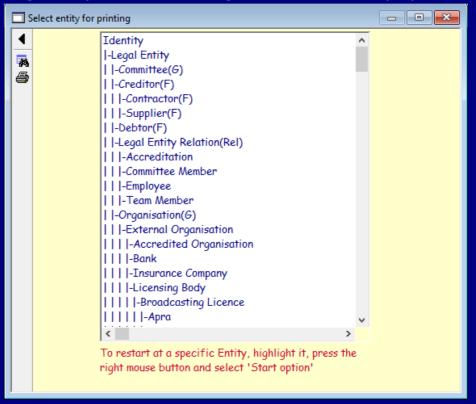

There are 8 options and one menu to manage tactics

### Define a strategy

See previous section

### **Print entity test plan**

This option will provide you with a list of all entities that need to be managed by a tactic. On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Find an entity
- 3. Print entities not supported by a tactic

### **Content of the screen**

Select an entity > Right click > the following menu will be displayed:

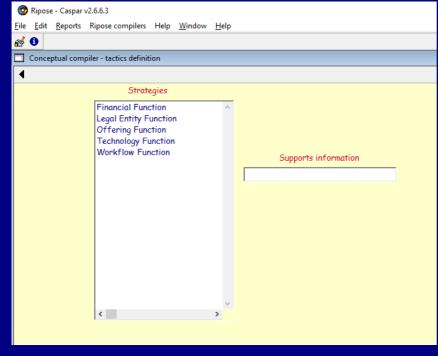

Print entity precedent only
Print all
Start printing from an entity

### Menu options:

- Print entity precedent only: This will produce a listing, in priority sequence, of the chosen entity. It will also show the 'state' of the entity (whether the entity has been selected by a previous RA 5 to be ready for being transformed from a conceptual object into a logical object which will create it as part of the logical data model). This is the same as selecting option 3 from the tool bar
- Print all: This will produce a listing of the state of every entity in the knowledge model
- Start printing from an entity: This will produce the previous list starting from the chosen entity

### **Tactic definition function**

To manage tactics. On selecting this option the following window will be displayed:

There are 2 functional areas:

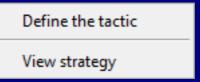

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

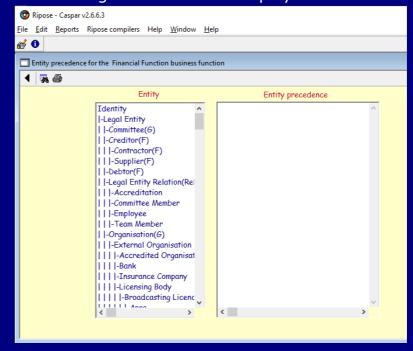

1. Close window

### **Content of the screen**

- Select a strategy > The entity allocated to the strategy will be displayed
- Right click on the strategy and the following menu will be displayed:

Define the tactic: The following window will be displayed:

There are 2 functional areas:

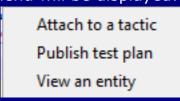

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Find an entity
- 3. Print entities not supported by a tactic

### **Content of the screen**

Select an entity > the entity will appear in the right hand list in its order of precedence > Right click and the following menu will be displayed:

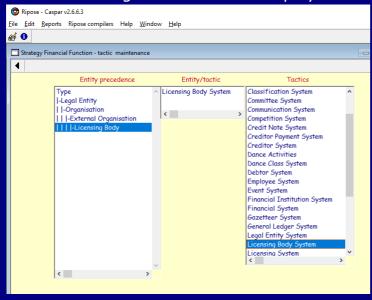

### Menu options:

- Attach to a tactic: To attach the entity to a tactic (may require the creation of a new tactic)
- Publish test plan: See previous reference (page 31)
- View an entity: Will display a window containing the details

### Attach to a tactic

On selecting this notion the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

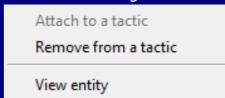

1. Close window

### Content of the screen

- 1. Entity precedence left hand list
- 2. The tactic that the entity is already attached to (blank if unattached) middle list
- 3. The list of all tactics right hand list

### **Entity precedence:**

Select an entity > Right click and the following menu will be displayed:

### Menu options:

- Attach to a tactic: Greyed out if entity is already attached
- Remove from tactic: If previous selection was incorrect. Cannot be done if the entity is already in a release
- View entity: To obtain a description of the entity

### Attach to a tactic

Select a tactic in the right hand list > Select the entity in left hand list and drag it to the middle list

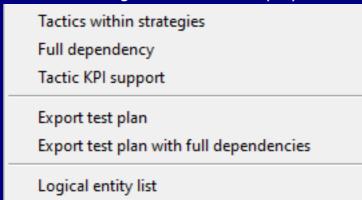

### Remove from a tactic

Can only be done if the entity has not been allocated to a release

End of Tactic definition function

### Report menu

On selecting this option the following menu will be displayed:

The following options are available:

- 1. Tactics within strategies produces a list in strategy/tactical precedence order
- 2. Full dependency produces a list of full dependencies
- 3. Tactic KPI supported produces a list of tactics and the measures they support
- 4. Export test plan Produces a .txt file (in the directory in the ripose.ini file). It can be opened with any spreadsheet program using the comma as a delimiter. Headings as:Phase,Strategy,System name,Dependent function,Dependent system,Dependent entity,Phase 1,Phase 2,Phase 3,Phase 4,Phase 5,Phase 6,Phase 7,Phase 8,Phase 9,Phase 10,Phase 11,Phase 12,Phase 13,Phase 14
- 5. Export test plan with full dependencies same as 4 (may be removed in a later release)
- 6. Logical entity list Not currently useful. Replaced by 4 and 5

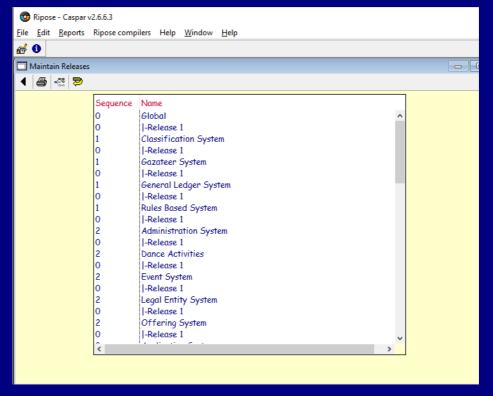

### End of report menu items

Print tactical test plan – an interim report showing entities in their tactical sequence

### **Prepare tactical releases**

This function allocates releases to each tactic and is optional (use only if you want to use the release planning function available from the main window toolbar).

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Publish To produce a print out of each entity in its appropriate releases
- 3. List report This will produce a listing outline of the entities in development priorities within each release
- 4. Deselect a selected line

### Content of the screen

The following options are available (a menu will appear with options that will be greyed out depending on where the cursor was at the time of the selection):

- Select a tactic
- Select a release

### Right click on the selected item

If this option is selected then the following menu will appear:

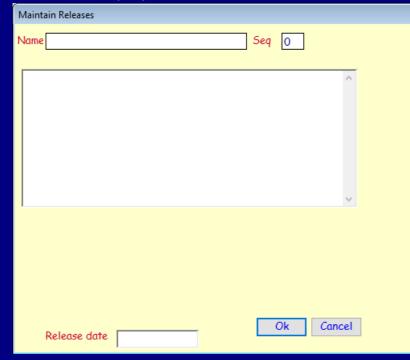

### **Functions:**

- Add a new release
- Deselect
- Close window

### Add a new release

The following window will be displayed:

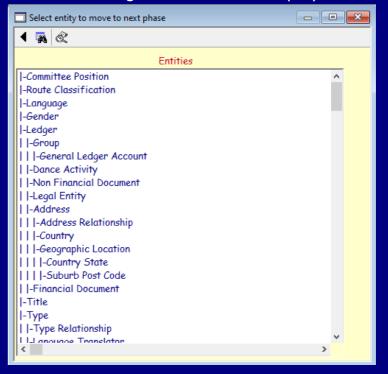

- Enter a name of the release > Sequence number (to control the position of the entry) > A description > Approximate release date
- Ok (or press Enter to accept)
- Cancel to reject

### **Prepare logical entities**

This function will change the status of an entity from conceptual to logical and vice versa. This is the last step the RA3 needs to carry out in order to pass the entities across to the RA 4, 5 & 6.

On selecting this option the following window will be displayed:

There are 2 functional areas:

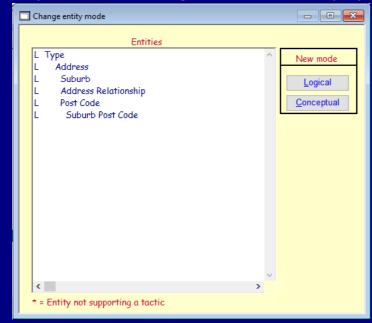

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

- 1. Close window
- 2. Find an entity
- 3. View an entity

### **Content of the screen**

Double click on any entity and the following screen will be displayed:

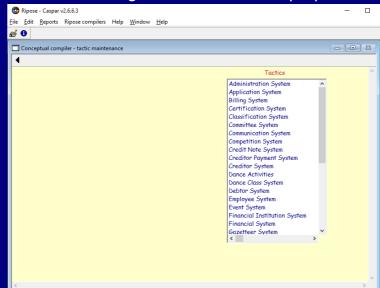

- Select an entity
- If it is conceptual and you want to move it to the Logical phase select the Logical button
- If it is logical and you need to add an additional association or move it or insert a parent or insert a sibling to it then select the Conceptual button

### **Print tactical test plan**

Same as on previous page.

# **Modify tactics and reports**

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

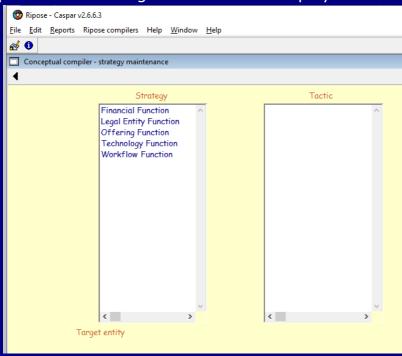

1. Close window

### **Content of the screen**

Select a tactic and the modify tactic window (as for adding one) will be displayed

# Move tactic to another strategy

On selecting this option the following window will be displayed:

There are 2 functional areas:

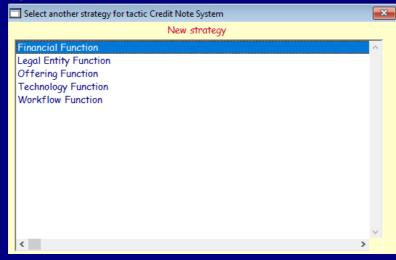

- 1. Tool bar
- 2. Content of the screen

## **Tool bar**

1. Close window

## **Content of the screen**

Select a strategy and the tactics will be displayed > Select a tactic and the following window will be displayed:

Select the new strategy

End of Tactical and Conceptual functions < Back

# **Logical Compiler**

Access to this compiler is afforded to Ripose Architects Grades 0, 3, 4, 5 and 6. This compiler provides the capability to define and maintain the following technology-centric objects:

- 1. Facts
  - Attributes RA4
  - Logical data model design RA5
- 2. Processes and Applications RA6

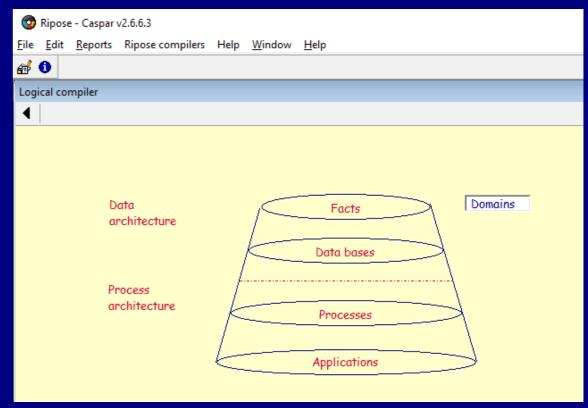

The rules for managing Logic are as follows:

| Factor        | Activity   | Class        |
|---------------|--|--------------|
| limit         | Keep things as small as possible for as long as possible | 3 sections   |
| differentiate | Separate sections into appropriate classes or phases     | Data         |
|               |  | Projects     |
|               |  | Applications |
| integrate     | Ensure all phases are fully aligned                      | Objectives   |
|               |  | Knowledge    |
|               |  | Strategies   |
| focus         | Prioritise the work                                      | Data         |

#### Note:

The operating instructions of this section will remain a Work In Progress until at least one RA4 is ready to use Caspar. The reason behind this is that the entire content of the Logical Compiler depends on having all the components of the Conceptual Compiler fully defined.

On selecting the icon in the tool bar or placing the cursor over the words 'Logical Requirements Compiler' on the Main Screen and activating the appropriate Mouse button the following window will be displayed:

Direct link

to training courses:

- RA4
- RA5
- RA6

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

### **Tool bar**

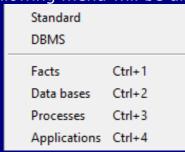

1. Close window

#### **Content of the screen**

- Domains Defines the field definitions of physical database management systems
- Data architecture
  - Facts This is where the RA4 identifies and attaches attributed to the appropriate knowledge class (developed by the RA2 in the prioritise order as defined by the RA3)
  - Data models/databases This is where the RA5 defines the logical data models
- Process architecture Work carried out by the RA6
  - Processes Defines high level activities
  - Applications Create pseudo code

#### **Domains**

On clicking on this option the following menu will be displayed:

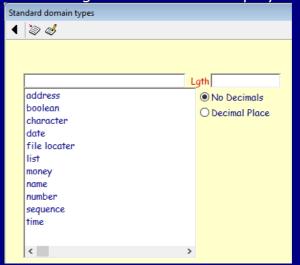

The following options are available:

- Standard
- DBMS
- Facts
- Data bases
- Processes Contact Ripose Pty Limited if you need a new process
- Applications

#### **Standard domains**

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

#### Tool bar

- 1. Close window
- 2. Add a new domain
- 3. Modify a domain

#### **Content of the screen**

#### Add a new domain

This is used to add a new standard type

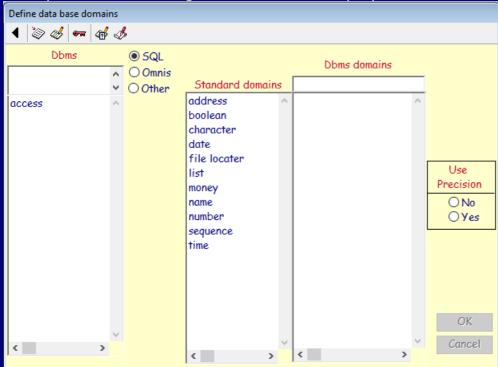

Enter a name > If an real number select Decimal Place otherwise the default is No Decimals > enter a length > Ok or press Enter

#### **Modify a domain**

Select a domain > Rename it > Change the length > Change the decimal option

This option enables you to tailor any DBMS domain. These are the properties that will be appended to each database field when Caspar produces the Create SQL declaratives.

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

#### **Tool bar**

- 1. Close window
- 2. Add a new DBMS
- 3. Modify a DBMS
- 4. Maintain foreign key and file switch type
- 5. Add a new standard domain type
- 6. Modify a standard domain type

#### **Content of the screen**

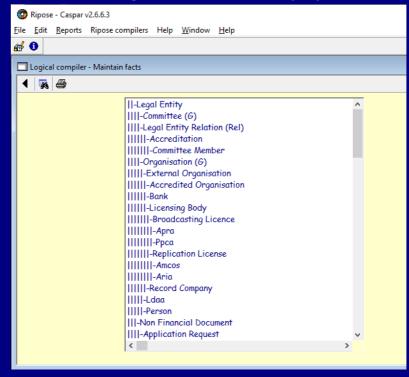

To be completed (see note on page 38)

#### **Facts**

The rules for managing Facts/data are as follows:

| Factor        | Activity   | Class               |
|---------------|--|---------------------|
| limit         | Keep things as small as possible for as long as possible | Data items          |
| differentiate | Separate sections into appropriate classes or phases     | Data from an Entity |
| integrate     | Ensure all phases are fully aligned                      | Knowledge           |
|               |  | Strategies          |
| focus         | Prioritise the work                                      | Projects            |

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

## **Tool bar**

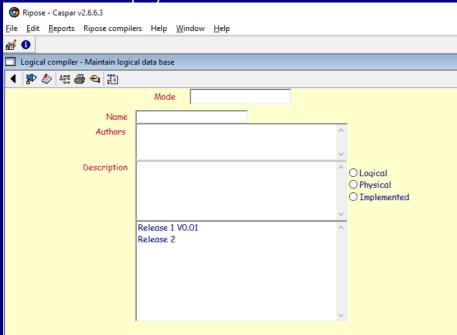

- 1. Close window
- 2. Find an entity
- 3. Publish

## **Content of the screen**

To be completed

#### **Data bases**

This option will enable you to manage the logical data models. On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

#### **Tool bar**

- 1. Close window
- 2. Add a new design
- 3. Modify database description
- 4. Design a database
- 5. Publish
- 6. Clone
- 7. Export

## **Content of the screen**

To be completed

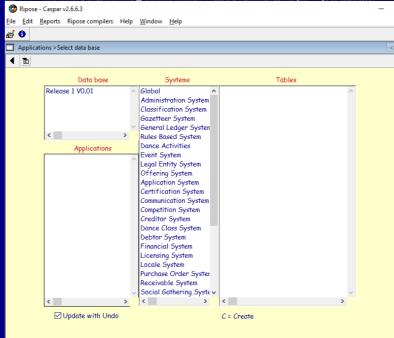

# **Applications**

# To be completed

The rules for managing Applications/Projects are as follows:

| Factor        | Activity   | Class         |
|---------------|--|---------------|
| limit         | Keep things as small as possible for as long as possible | Subject Areas |
| differentiate | Separate sections into appropriate classes or phases     | Clusters      |
| integrate     | Ensure all phases are fully aligned                      | Knowledge     |
|               |  | Strategies    |
|               |  | Data          |
| focus         | Prioritise the work                                      | Applications  |

On selecting this option the following window will be displayed:

There are 2 functional areas:

- 1. Tool bar
- 2. Content of the screen

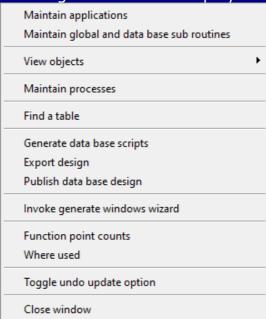

#### **Tool bar**

- 1. Close window
- 2. Add a new design

## **Content of the screen**

To be completed

On selecting a release the following menu will be displayed:

Options:

To be completed

# **View objects**

On selecting this option the following menu will be displayed:
